Hi Marietjie

I trust that you are well.

Please can you assist as follows:

- Angus cow KCM160029 needs to be reinstated and the sex changed to a heifer, she is not a bull and should never have been cancelled. I then need her calf registered from last year:
 - KCM190037 a bull calf born on the 22/9/2019 named Dunedin Bronc 937.
 - His sire is Baldrige Bronc (85547040)
 - Birth weight 35kg and conceived via Artificial insemination.
 - The calf is Black in colour.
 - He then weaned at 286kg on the 3rd April 2020. He weaned in my logix group 202001 on my system. If he needs to be indexed individually that is ok.

I would be most grateful for your assistance.

Regards

Carl Miles
