Hi Tracey,

To clarify: if a heifer has her first calve at 40 months she and all her calves will be cancelled.

But, what we can do is to register the dead calves's births NFR that will definitely have a influence on the IBP.

Just to be sure, from the calve book page that you send me JOY 19-172 had a calve on 01-03-22 with a weight of 32kg, was it a male or female

and please send the ID number JOY 22-.....

JOY 19-176 had a calve on 04-03-22 with a weight of 32kg, male or female and ID number that you would like us to register the calve with (JOY 22-.....)

Thank you.

Kind regards,

Miki Fourie

Hi Miki,

Please could you clarify. JOY 19-172 had her calf at 40 months. Does this mean that ALL her calves since then JOY 23 - 50, JOY 24 - 46 and JOY 25 - 119 are automatically cancelled because of their mother?

Looking back in the calf books, the following cows all had calves, but had still born calves due to them having a 3 day stiffness outbreak. We therefor did not register their calves which has resulted in them being too old at their "first" calving.

JOY 19 - 172

JOY 19 - 176

Is there any way of correcting this, or is it too late to register their first calving's? I have attached a picture of the calf book.

And then with JOY 24-40, her mother JOY 19-176 was also 40months at her first calving, does this mean that all her calves need to be cancelled?

Thanks,

Regards,
