

Afternoon Twane,

Please see attached the calving records for the cattle in question. Please let me know if this helps or if I should put it in an excel document. The only animal that is an issue is CFZ190078 as I see on the inspection form it was recorded as CFZ190079 but this is not possible as CFZ190079 died in 2024. I am happy to move this animal into my commercial herd due to the error. I should have picked this up earlier.

BMAFCFZ 220018 was inspected and classes as Annexure A and her mother was also inspected the same day and classed as Annexure A. I think this is what is creating the issue here. I am happy for them both to stay as A's but don't know if its because BMAFCFZ 220018 was entered again when we were trying to update the records.

Then on the bulls used I purchased some semen from some farmers years ago before we decided to go the Stud route. This is where we see the issue on BMAFCFZ 210002 and BMAFCFZ 210106. I am happy for these to be recorded as Multisire and will change in my system as well.

BMAFCFZ 220018 who was sires and DNA tested to sire BMAMRLR 180102 I own this sire and purchased him and some other stud/C bulls on action when I started going the stud route. Please see attached the invoice showing this purchase. All these bulls are still on my farm and in use. Would they be able to go under my stud?
