Hi Chantelle

Thank you for your reply.

I'll leave you attached a file with the progeny of MAN142288 (mother of MAN173241), she's a different mother than MAN173114 (mother MAN142188). MAN142288 had no calves in 2017.

According to the error list, the problem with MAN183623 and MAN204207 is that their fathers aren't identified?

Regarding the NFR males, we don't have the information about their mothers, we are trying to find the information.

Hope it might help.

Please tell me if you need something else.

Thank you so much for your help!

Kind regards,

Hi Lea y Chantelle.

Hope you are okay!

Today I'm writing to you because we need to register some animals that we delayed in collecting their information.

I leave attached the file with the animals mentioned and I will send you through Bengu other animals that were left unsent that have identified and registered parents.

Please tell me if you need something else.

Thank you so much for your help.

Kind regards,
