Good day Gavin,

Do you have one breeding session?

The best for them as a group to min. the admin is just to upload a NFR calve. I can help you with that.

Regards,
Bernard

Subject: Request for Reinstatement of Heifers Removed Due to Bull Fertility Issue

Good day,

A group of heifers that were put to the bull JRB01-085 have defaulted on age at first calving. The bull developed an abscess in his is sheath during the breeding season. I noticed this at the time but did not fully realise how serious the injury was.

I later discovered that the bull's penis was obstructed by this injury during the breeding season.

This situation is therefore not the fault of the heifers, which have now been cancelled on the system. I would like to appeal for these heifers to be reinstated so that we can give them a second chance. Only 15% of the heifers calved on time under these circumstances.

If necessary, we would be willing to have these animals classified as non-transferable.

Thank you for your consideration. I attached herewith a list of this breeding herd showing which heifers did not calve.

Kind regards,
Gavin Bristow
