Hi Ann,

I hope you are well.

We have a very nice young bull that has not passed an inspection based on the index of his 12 month weight result.

Details of bull:

Identification Number	BMAMJB 244501
Prefix	JUST BEEF
Name	JB 244501
Computer No.	0097781124 (M)
Date of Birth & Age (months)	25/08/2024 (-)
Section / subsection	B (Appendix B) / None
Status	CAN (Cancelled)

Birth weight was 34kg.

Weights:

Wean	12 M	18 M	Phase
207 ₉₂	266 ₈₃	376 ₈₉	B22

I have three weights taken on our system for this bull, they are as follows:

1. 206kg on 28/02/25 – would be 223kg standardised to 205 days
2. 231 kg on 17/04/25 – standardised 205day weight is 206kg which must be the one used.
3. 379kg on 19/02/26 – standardised to 547 days is 382kg. Standardised to 365 days is 266kg. Bull was 543 days old at this stage.

I don't have a record of a 12 month weight for the bull yet there is one on Logix. Are we able to remove that weight? This bull is perfectly sized and comes out of a small dam. Our average dam weight amongst bull others from that year group was 520kg. Dam of JB244501 was 489kg.

Would appreciate your assistance.

Regards,

Buster

Kind Regards
