Good Morning Michelle

I am trying to sort out the cattle on the Pending List so am afraid I'm bugging you and Charné at Unistel to try to solve the problems.

I think we now have all the necessary records to verify the sires of the pending bulls or else I need to find out from Charné what else is needed.

Regarding the PRF (weaning weights??) of the females...

- Again we have a mystery with the weaning weights of PB 230003 and PB 230004, which for some reason weren't recorded in Piet's day...but they are still in the herd and we have 18mth indices for them. All the later cattle have weaning weights etc. Is there anything we can do about this?
- PB 240009 (99/100) and PB 240010 (113/115) are marked as PRF but have weaning and 18 mth indices. Is this what they require?
- PB 250014 had a weaning weight of 168 kg (and was cancelled) and PB 250015 of 201kg.
- I have the sire of PB 230029 to be Jintra Acclaimbut then in checking through the Per Capita list I see that she and a couple of others PB 230022; PB 230029; PB 230061; PB 230067 were cancelled in 2025.
Somehow they have crept back on to the list ...there may be a reason for this...I'm not sure..
- Also, Michelle, I see that two 2025 females were initially incorrectly recorded as male . They have now been recorded as female but could the reference please be changed to Foleshill Episode PB2547 (Instead of Norway) and Foleshill Annabelle PB2560 (instead of Navy)

Please let me know if there is other info you need from me.

Kind regards and, again, very many thanks

Anne
