Hello Marietjie

Please can you assist with the following calf switches for the Santas!

-- this is a 3-way calf swap!

-- you can use this email chain between me and Yolanda as the ESB, as she indicated that the breeder agrees.

VV 20-0228 (0291317535) - In conflict with VV 13-0044 (0290833086)

-- Please make the Dam VV 15-0154 (0291020956)

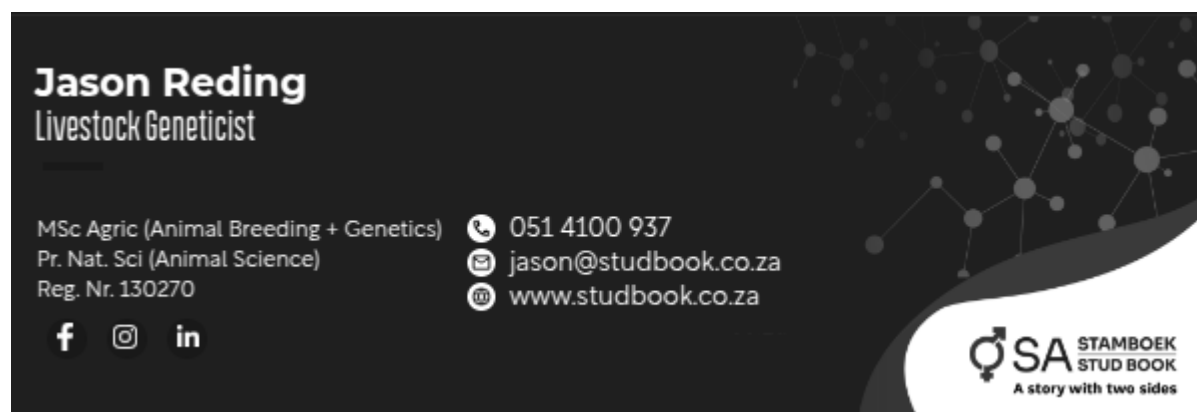

VV 20-0229 - In conflict with VV 13-0177 (0291317543)

-- Please make VV 13-0044 (0290833086) as the dam of this animal

VV 20-0232 (0291317576) -- Dam is not VV 15-0154 (0291020956)

Please make VV 13-0177 (0291317543) as the dam of this animal

Let me know once it is done and I will push the genomic changes through!

CC:Willie@panzi.co.za

Good afternoon

Thank you very much for your feedback. Willie confirmed telephonically that you may proceed with the necessary corrections where required.

Please let us know whether you will be making the changes from your side, as Susan does not have access to make changes to the parents.

Regards

From: Jason Reding <jason@studbook.co.za>

Subject: Re: VV240128

Hello Yolanda and Willie

Thank you very much for this email and apologies for the delayed response.

Yes, I can see that this is actually a three way calf swap!

If I can look at the other calves that are born around these two animals, I have the following comments;

VV 20-0225 - Not genotyped, Dam VV 14-0006 and Sire VV 14-0184 are genotyped.

****Do not pick up VV 14-0006 as the dam of another animal**

VV 20-0226 - Not genotyped, Dam VV 11-0092 not genotyped, sire VV 13-0121 is genotyped.

VV 20-0227 - Not genotyped, Dam VV 16-0203 not genotyped, sire VV 10-0040 is genotyped

VV 20-0230 - Not genotyped, Dam VV 16-0096 not genotyped, sire KT 11-0020 is genotyped

VV 20-0231 - Genotyped and Matching Both Parents

VV 20-0232 - Genotyped, Matching Sire, Dam VV 15-0154 not genotyped.

****NB I pick up VV 13-0177 as the dam of this animal**

VV 20-0233 - Genotyped, Matching Sire, Dam VV 10-0142 not genotyped.

VV 20-0234 - Not Genotyped, Dam VV 16-0020 is genotyped, Sire VV 16-0012 is genotyped.

****Do not pick up VV 16-0020 as the dam of another animal**

VV 20-0235 - Matching Both Parents

Okay, so I think we see the switch!!

VV 20-0228 - In conflict with VV 13-0044

-- genomics does not identify the true Dam, but the sire VV 16-0207 is verified

-- here we can make the Dam VV 15-0154, as she is the only dam in the trio not tested!!!

VV 20-0229 - In conflict with VV 13-0177 (This dam has 2/3 verified calves)

-- genomics identifies that VV 13-0044 is the true Dam, but I do not pick up a sire meaning it is one not yet genotyped.

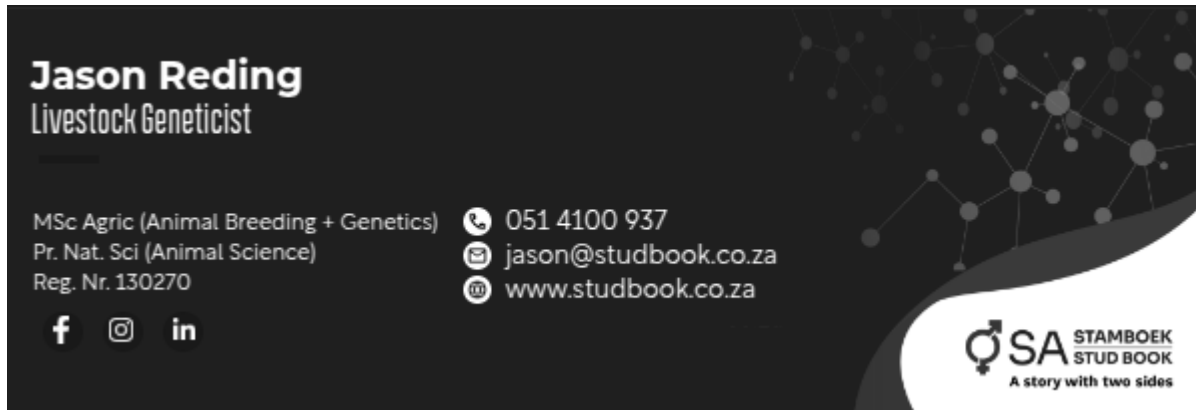

VV 20-0232 - Genotyped, Matching Sire, Dam VV 15-0154 not genotyped.

****NB I pick up VV 13-0177 as the dam of this animal**

So please proceed with the Dam changes on LOGIX, and then I can push all the genomic corrections through for fixing up!

Then we might just run the BLUP overnight!

Warm Regards

Hi Hannah/Jason

I think Jason may still be on leave, so I hope you can assist.

The parents of VV24/128 are genomically correct, but the parentage of the grandmother is incorrect (VV20/229). She has three calves, one of which is now showing as pending – VV24/128.

Could you please check whether any tests for the correct parents of VV20/229 have been received in the meantime? VV24/128 is being sold at an auction and is currently blocked because the dam's parentage is negative.

The other two calves are showing as correct on Logix. Is this because they have not been parentage tested, or why are the other two calves not also being flagged as pending if the dam's parentage is causing the issue?

I would appreciate it if you could please investigate this, as the animal is due to be sold at auction. It is also possible that the wrong tail-hair sample may have been submitted under the wrong animal number. Perhaps you could check whether anything in the results or records might indicate a sample mix-up or any other discrepancy.

Thank you for your assistance.
