EXAMINATION REPORT

To Whom It May Concern;

On the 1/09/2026 I examined a heifer, ear tag number BFT 2302, for Mr. HJ Botha to check the viability of her pregnancy. She had previously been scanned earlier on in this year and was confirm pregnant, but she shows no signs of udder formation or late term pregnancy now.

I performed a Per rectal examination with ultra-sound to find that she is no longer pregnant. Since her last Examination, FMD has come through the area as well as the farm and we are seeing that some cows are aborting because of the disease. She is otherwise healthy and has no pathology internally (along her uterus or ovaries) as well as no pathology externally.

She can be mated again and go back into work as it looks like there are follicles on the ovaries.

Should you have any further questions please do not hesitate to contact us at EG veterinary services Kokstad 039 727 3292.

Kindest regards always,

Dr Tayla Erlank

BVSc, DVN
