HYNDERS FLYER'S WILD CARD

Unistel Medical Laboratories

Genetic Report

Polysaccharide Storage Myopathy Type 1

Name: Hynders Flyers Wild Card

Registration ID: -

Date of birth: 15/01/2026

Gender: Female

Breed: Appaloosa

Laboratory number: U632806

Client name: De Groot, R

TEST DESCRIPTION:

Polysaccharide Storage Myopathy Type 1 (PSSM1) is an autosomal dominant muscle condition that occurs primarily in horses of Quarter Horse descent, but has also been observed in Draft breeds. The disease is caused by a mutation in the *GYS1* gene, which alters the functionality of the glycogen synthase enzyme. In horses that are affected, the conversion of glucose to stored glycogen occurs at a much faster rate, resulting in abnormally high concentrations of glycogen in muscle tissues. Symptoms include muscle stiffness and pain after exercise ("tying up"), skin twitching, sweating, lameness and a reluctance to move after light exercise. The age of onset can vary, with some horses showing symptoms from 2 to 3 years of age, while others remain subclinical. While PSSM1 cannot be cured, its effects can be effectively managed through the implementation of appropriate diet and exercise routines.

TEST RESULT: CLEAR

BREEDING IMPLICATIONS OF TEST RESULT:

This horse has two copies of the normal allele for *GYS1*, and will neither develop nor pass on the mutation for PSSM1 caused by the *GYS1* mutation to its offspring.

Disclaimer: Unistel reports these results on the premise that the biological samples received are from the individuals nominated by the owner/breeder/requestee. This certificate replaces all previous issued certificates. While every effort is made to prevent incorrect results, Unistel Medical Laboratories does not accept any responsibility for any losses that may occur as a result of human or technical error. Should gross negligence be proven, the claim shall not exceed the value of the contract.
