Date

Many thanks Lea - this all looks correct to me - will send you the email the DNA lab sent me - there are a lot of attachments to it with the details you need. Will you be able to add the DNA code next to each animal with that information? And yes, please change the sire of 18-1 as requested - there were two breeding groups, so this is correct.

Regards

John

Morning, me again,
AG 13-134 was added as the sire for below mentioned animals.
ANN 18-1 - in Logix AG 13-134 shows as sire of this calf, must I change it to THE 06-36 - just want to make sure, because below, all calves were sired by AG 13-134? The dam, ANN 10-06's section is F0, so ANN 18-1 will stay A.
As per my previous mail, awaiting the DNA results.

Kind regards.
