To Whom It May Concern

Re: Tuli Heifer E1666 not calving in 39 months

I would like to ask the Tuli counsel to consider reinstating E1666 for not calving in the first 39month as per regulations of the Tuli breed.

As we are all aware at present the whole country has been going through a drought for the past 5 years with the Eastern Cape being exceptionally hard hit. We breed out of Salem near Grahamstown and have only been receiving half to less than half out annual rainfall for the past few years making food scarce and farming even tougher.

E1666 was born on the 28/07/2016 and had her first calf ACK 1923 on the 10/11/2019. According to me she calved 2 weeks after the required 39 months set out in the Tuli regulations.

Due to this I am asking the Tuli Counsel to take the current farming conditions and the fact that she calved just after the 39 months to consider reinstating her .

Thank you for your time

Regards

Leard King
