Môre Liezel

OP die epos het ek alles gedoen wat ek kon om te help, dier gaan die Genootskap moet sê wat gedoen moet word met die bulle wat nie DNA het of gedoen is dat die geboorte kan laai. Kyk na punt4.3 af asb.

Dankie en lekker dag!

Marietjie

Dear Mr Kruger

Thank you for your email dated 28 April 2020, and thank you for your offer of help. I need it please.

I received an error list during the course of 2019; which largely put a halt to my entering further data on to the online system as I first wanted to address these errors. I have since sold animals, and i have more recently removed them off the list due to calving late or large inter-calving periods as a result of the drought. That part was easy. The rest needed a more in-depth investigation to determine the cause/solution to the errors....

There are number of errors in the list that I will need your help/advice with, please:

1 - Birth notification BATCH: ANGI0621825LX81 NGIFCLW 180305 error:

The error that was lodged read: "Sire never in possession of owner/not loan bull/not approved for sem".

My response: The dam was purchased from LeRoy Nguni Stud; the cattle remained at that stud for a short while after the purchase, and the dam was pregnant with this calf at the time that I took possession of her; LeRoy Nguni stud was in possession of sire 0071911267 and Leonie Yendall confirmed the sire details. As such, please can you enter this birth notification.

2 - Inspection not loaded Error "NGIFCLW 160236 does not exist"

My response: This was an FR who was inspected on 14/5/2020; and she passed inspection. Surely she started to "exist" on the date of the inspection, and should be listed as an FR? I'm not sure what needs to be done here?

3 - Inspection not loaded Error "NGIFCLW 180274 cancelled as sold on

My response: This heifer must have been cancelled in error because she was not sold - I still have her. Please can you reverse the cancellation that you have on record for 1/11/2018 and load the inspection result that took place on 14/05/2019.

4 - The following still need to be addressed, and are all related to a lack of genetic ID for a bull that I used to breed two cows, and their subsequent calves:

Two heifers that passed inspection have not been loaded:

4.1 Inspection not loaded for CLW16235 because she was sired by 0073979536 and no "need genetic ID" yet for sire.

4.2 Inspection not loaded for CLW15207 because she was sired by 0073979536 and no "need genetic ID" yet for sire.

These two cows have both had calves and these births have not been loaded:

4.3 Calf CLW18314 was not birth registered because dam (CLW16235 as above) was sired by 0073979536 and no "need genetic ID" yet for sire.

4.4 Calf CLW18313 was not birth registered because dam (CLW15207 as above) was sired by 0073979536 and no "need genetic ID" yet for sire.

My response: I am not sure how best to deal with the problem? I have no genetic material for my bull 0073979536; I did not use him for long and unfortunately I failed to take a genetic sample from him before I sold him. Can I submit a sample of genetic material from both of these cows (i.e. of his off spring), that together will demonstrate evidence of common paternity, consistent with the sire's genetic material? I'm not sure where I would have this genetic materials analysed or how to take the samples etc. Again, help/advice needed here please.

5 - Late birth notifications:

I am late in loading my last batch of birth notifications (31 notifications loaded and submitted 6 June 2020). I accept that there will be a penalty fee for late notifications, but some of them are more than 6 months late. Please will you motivate for these animals to still be registered? I have always kept a precise off-line record but, due to the above errors and my worry that I might make further errors in uploading these data before the current errors were corrected, and this coupled with the draught and more recently Covid-19, I just lost track of time and did not upload these records online in the required time. Please can you help by motivating that this stock can still be registered?

6 - New bull not reflecting on my per capita list:

I purchased a bull (XA160040; 0084253855) from Xhacha Nguni Stud at the Amatole Nguni Sale on 18 May 2019, and I notice that he does not reflect in my per capita list for some reason. I assumed that the sale-group/seller would do this admin. Please can you get this bull to reflect as mine from that date; or please tell me what I need to do to have this corrected?

As you can see, my list is long. So, thank you very much in advance for your time and your help.

Kind regards

Cliff
