# EBVs, EBVi's en Seleksie Waardes

## Logix Koei Waarde

Selekteer vir koeie wat:

- vrugbaar is
- swaar kalwers speen
- maklik kalf en
- met lae onderhoud

## Logix Groei Waarde

Selekteer vir:

- Doeltreffende groeiers
- Op die veld en
- In die voerkraal

## Logix Produksie Waarde

80% Logix Koei waarde +  
20% Logix Groei waarde

## Logix Karkas Waarde

Selekteer vir meer vleis aan  
die karkas

## Logix Genomika

- Identifikasie
- Ouerskap
- GEV's
- Enkel geen toetse

**EBVi (EBVindeks)** Die basis van 'n teelwaarde indeks is 100, wat die gemiddelde teelwaarde van die lewendige diere in die ras aandui en 50% van die diere in die ras het waardes tussen 90 en 110. Waardes bo 100 is altyd in die meer gewenste rigting, hoewel vir sommige eienskappe, bv geboorte gewig, is gemiddeld meer gewens.

**EBV: (Estimated Breeding Value)** is die teelwaarde en dui die genetiese potensiaal van die dier vir 'n spesifieke eienskap aan. Dit word aangedui in die eenheid van meting en relatief tot die gemiddeld van die diere wat in die basis jaar gebore is (1990).

**GEV (Genomiese Teelwaarde)** is die teelwaarde gekombineer met die genomiese inligting op die DNA van die dier en is dus akkurater weens meer inligting. Ouerskapverifikasie word ook aangedui, mits die ouer ook genomies getoets is.

## Interpretasie van EBVi en Seleksie Waardes

**Seleksie-waardes** kombineer soortgelyke teelwaardes op 'n wetenskaplike manier om die seleksie van diere te vereenvoudig. So word VV (Versvrugbaarheid), KV (Koeivrugbaarheid) en Lanklewendheid wetenskaplik gekombineer om die subwaarde Vrugbaarheid te vorm, deur die oorerfbaarheid en ekonomiese belang van die eienskappe in ag te neem. Die subwaardes word ook in indeks formaat aangedui, so 'n dier met byvoorbeeld 'n subwaarde van 110 vir Vrugbaarheid, sal geneties bogemiddeld wees ten opsigte van lewendige diere in die ras vir vrugbaarheid.

**Koei Waarde en Groei Waarde** is die kombinasie van die subwaardes in 'n enkele waarde. Dit gee 'n vinnige en maklike indikasie van die gekombineerde genetiese waarde van die dier ten opsigte van sy ras. Daar word egter aanbeveel dat daar ook na die subwaardes gekyk word in die geval van die koeiwaarde, aangesien diere wel verskillende swak en sterk punte het.

# Beskrywing van Eienskappe

| Kalf gewig                                                                        |                                                                                   |

- Gemiddeld van lewendige diere in die hele ras: 100
- Bokant 100: meer gewenste rigting,
- Onder 100: minder gewenste rigting

### Wat beteken 'n Seleksie Waarde bo ras-gemiddeld (100)?

- Kalfgemak:** Kleiner kalf by geboorte - makliker kalwing
- Kalfgroei:** Swaarder kalf by speen a.g.v. groeikragtigheid van die kalf self
- Melk:** Koeie met meer melk en beter moeder eienskappe
- Onderhoud:** Diere met laer behoeftes vir onderhoud (laer volwasse gewig)
- Vrugbaarheid:** Koeie / dogters wat vroeër en/of meer gereeld kalf.
